SIVL Service Contract

An SIVL service contract is designed to preserve your SIVL line by checking for a 'soft' vacuum and replacing valves before they fail. Our highly experienced engineers will inspect your line and provide a full report on the current state of your line and ancillary equipment as well as suggesting any remedial works necessary to keep the system in a safe and efficient working order. A typical service contract will last 12 months.

What does it cover?

- Inspection of pipeline and all valves for wear and damage
- Record any defects with recommendations for repair
- Repair anything that is considered dangerous (at an additional cost)
- Provide a written service report for the system together with a priced proposal for any remedial work required.
- On-site technical support will be provided within 3 working days.
- Telephone support from 08.30 to 17.00 Monday to Thursday, 08:30 to 16:00 on Fridays.

Why do you need it?

- Will keep the line efficient, therefore using less liquid/gas therefore decreasing costs
- Will greatly reduce the risk of breakdown that could mean downtime and interruptions to your process
- If something does go wrong we can guarantee an emergency call out within 3 days at reduced rates.
